

# Lightening Round Essays

If Sebastian doesn't earn an A, then nobody should, because he is on top of his work and tries to help his group whenever they need help.

The most difficult part of the class for me is when we were on the topic of factors. It took me a long time to finally understand how to use the different functions related to factors and how to reorder and rename factors.

The easiest part of the class for me was functions because I learned functions in a Python class and it was very similar to do in R.

The topic of joining datasets was the most interesting for me. I know that sometimes one dataset isn't enough to complete an analysis and that multiple datasets might be needed. I found it nice that we can join datasets easily which can help us tremendously in completing an analysis.

One piece of advice I would give to a student taking this class would be to not procrastinate just because there is no hard due date. This was the problem I encountered and it caused me to play catch up the entire quarter. I felt like I could have demonstrated and done much more work if I just completed my assignments on time.
